

Access the power of GoldMine®— anytime, anywhere.

Now it's easy to access the full functionality of GoldMine® Corporate Edition from any Web connection or from a local area network (LAN). With iGoldMine™ and iGoldMine™ Plus, you can access your sales and marketing information, and your customer service and support information, to better manage your customer relationships.

iGoldMine and iGoldMine Plus

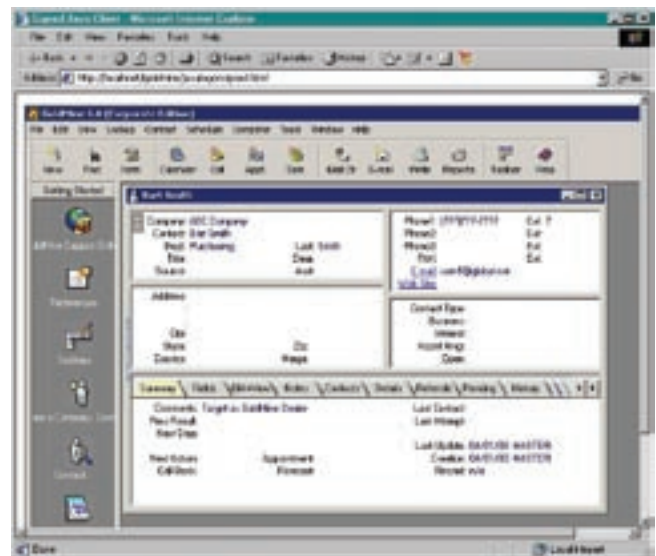

The power of GoldMine Corporate Edition lies in its ability to track customer relations across individuals and teams and through the entire customer life cycle. iGoldMine offers the functionality of GoldMine Corporate Edition with added security by eliminating the need to have locally stored information. A thin client strategy utilizes server-based computing to enable organizations to administer, deliver and update applications from a central location to a wide variety of users. All transmissions are fully encrypted to secure critical corporate data at all times, while the real-time nature of the information helps remote users function more effectively and productively in creating and fulfilling new business opportunities. Therefore, iGoldMine is a great solution for anyone who needs to access their customer information remotely.

High-value workers can make existing tools and processes even more profitable with iGoldMine Plus. iGoldMine Plus offers full remote access to GoldMine Corporate Edition plus more than 30 additional applications—including Adobe® Acrobat® Reader®, Microsoft® Excel, Microsoft Word, Microsoft Outlook® and other popular business tools. Like iGoldMine, iGoldMine Plus features full encryption of all transmissions for worry-free remote access to critical data. With expanded access to applications beyond GoldMine Corporate Edition, iGoldMine Plus delivers faster ROI at lower cost than competitive solutions. It supplements the power of iGoldMine with advantages that can make execution and strategy more proactive and effective.

Benefits that boost your effectiveness and potential

Both iGoldMine and iGoldMine Plus offer immediate and long-term advantages for all types of organizations:

- Keep data secure on the server behind your corporate firewall and during remote access and transmission through full encryption—so you never have to worry about your mission-critical information.
- Expand opportunities, boost productivity, and enhance your bottom line by giving your remote sales force secure access to GoldMine and other Windows applications via the Web.
- Leverage existing infrastructure and maximize investments for faster ROI without resorting to costly solutions like Citrix MetaFrame® or Netilla®.
- Reduce costs and increase efficiency by handling administration at a centralized location—not remote offices—and allowing every location to focus on their contacts.
- Access real-time data through one centralized database that eliminates information delays, information losses and synchronization headaches.
- Implement with ease by allowing remote users to get up and running quickly with just a URL—no client installation required.

iGoldMine and iGoldMine Plus offer you the ability to manage all customer relationships by supporting everything from basic contact management activities to scheduling and management analysis to customer service tracking and management.

A flexible solution that gives immediate, real-time access to GoldMine Corporate Edition

Use iGoldMine and iGoldMine Plus to:

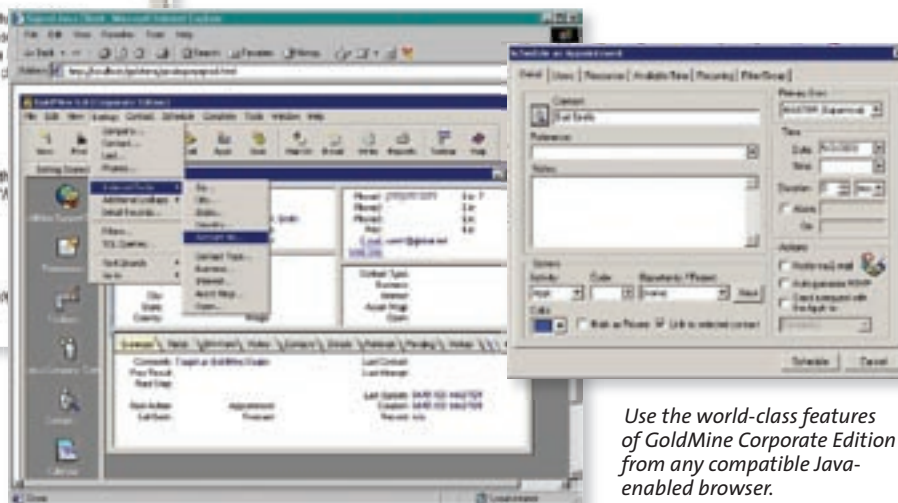

- Supplement your regular access to GoldMine
- Deliver new GoldMine applications to distributed teams
- Use existing desktop hardware without making upgrades
- Support the use of multiple desktop operating systems or platforms
- Replace synchronization procedures with live access
- Rapidly configure and deliver with the complete control of a central IT department
- Connect over a local LAN, the Internet or other network connection
- Access 30 additional applications with iGoldMine Plus
